

PARTERSHIP BETWEEN MOBILEGOV AND ID QUANTIQUE

Sophia Antipolis, March 4th, 2010 – As part of its development and innovation strategy, Mobilegov, creator of the Digital DNA technology, announces the signature of its marketing and technical agreement with ID Quantique, a Swiss company.

This partnership is part of Mobilegov's sales dynamics initiated during last quarter 2009 and strengthens the two companies offers on both the technical and the business level.

On the one hand, on the technical level, the partnership between Mobilegov France and ID Quantique lays on the integration of the quantum generator Quantis inside Mobilegov's server, the Digital DNA ID BOX that was launched in October 2009, during the "Assises de la Sécurité" event, in Monaco. By generating random non replayable series, the Quantis card allows Mobilegov to better secure the transportation of the digital DNA information. Mobilegov is the first authentication solution editor that integrates such a card. The company crosses a milestone in the level of security achieved by an authentication server, a premiere, done in the Mobilegov Digital DNA ID Box. The most common strong authentication solutions using an OTP (One Time Password) generator do not provide this level of security.

Similarly, ID Quantique, the Swiss publisher, will integrate the Digital DNA technology in its Cerberis solution, which enables streaming encryption using keys secured by quantum physics.

On the second hand, on the marketing level, both editors Mobilegov and ID Quantique will supply their customers with their combined solutions. Mobilegov opens its international channel to ID Quantique; which in return introduces its prestigious customers, particularly in the area of high-speed network encryption for the banking markets and health services and in the area of hazard generation for online games.

Mobilegov and ID Quantique will also take part to several events in order to promote their solutions. They are part of the already begun guidance to offer their market disruptive technologies, allowing a real alternative and unsurpassed performances.

About ID Quantique : **Encryption specialist**

Created in Geneva in 2001, the company markets solutions based on quantum physics. ID Quantique is renown in providing security solutions to the financial industry Governments and Defense. The random quantum generators of the company are an acknowledged reference in the gaming and lottery industry.

About Mobilegov : **IT security software editor**

Mobilegov is an IT security software editor. The company was founded in 2004. Its purpose is to provide its customers solutions to protect their sensitive data and to authenticate their users. These solutions are based on the Digital DNA, a technology protected by international patents which exploit the identification of the used equipments.
